# MATH 232 Section 4.1 pre-lecture comments

#### **Lecture Outline**

We will learn how to compute **determinants** for general  $n \times n$  matrices. This section gives the definition of determinants in terms of its *cofactor expansions*.

**Important**: *A* is invertible if and only if  $det(A) \neq 0$ .

All matrices in this chapter are square matrices.

### New terminology

- 1. determinant
- 2. minor
- 3. cofactor

Recall the inverse of the  $2 \times 2$  matrix. Given

$$A = \begin{bmatrix} a & b \\ c & d \end{bmatrix} \quad \text{then} \quad A^{-1} = \frac{1}{ad - bc} \begin{bmatrix} d & -b \\ -c & a \end{bmatrix}$$

In particular, A has an inverse if and only if  $\frac{1}{ab-bc}$   $\frac{4}{5}$ . O

This quantity is called the determinant. (2×2 m/x)

Determinant of a 
$$2 \times 2$$
 matrix

$$\begin{vmatrix} a & b \\ c & d \end{vmatrix} = det \begin{pmatrix} \begin{bmatrix} a & b \\ c & d \end{bmatrix} \end{pmatrix} = ad - bc.$$

Leterminant

Is there a similar "number test" for  $3 \times 3$  or larger matrices?

## Determinant of a $3 \times 3$ matrix

Paij & ith row jth column

If 
$$A = \begin{bmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{bmatrix}$$

then det(A) is the following:

$$a_{11}a_{22}a_{33} + a_{12}a_{23}a_{31} + a_{13}a_{21}a_{32} - a_{13}a_{22}a_{31} - a_{12}a_{21}a_{33} - a_{11}a_{23}a_{32}$$

$$a_{11}$$
  $a_{12}$   $a_{13}$   $a_{11}$   $a_{12}$ 
 $a_{21}$   $a_{22}$   $a_{23}$   $a_{21}$   $a_{22}$ 
 $a_{31}$   $a_{32}$   $a_{33}$   $a_{31}$   $a_{32}$ 

Ex: 
$$A = \begin{bmatrix} 1 & 2 & 1 \\ -1 & 2 & -1 \\ 1 & 0 & -1 \end{bmatrix}$$
  $(-2) + (-2) + (0) - (2) - (0)$   $(-2) + ($ 

Note: This idea only works for  $2 \times 2$  and  $3 \times 3$ , not  $4 \times 4$  or larger!

# 4x4 has 24 terms

There is another way to express the determinant, in terms of *smaller-sized determinants*:

$$\det(A) = a_{11}(a_{22}a_{33} - a_{23}a_{32}) - a_{12}(a_{21}a_{33} - a_{23}a_{31}) + a_{13}(a_{21}a_{32} - a_{22}a_{31})$$

$$= a_{11}\begin{vmatrix} a_{22} & a_{23} \\ a_{32} & a_{33} \end{vmatrix} = a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{11}\begin{vmatrix} a_{22} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$= a_{12}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32}\end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32}\end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32}\end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32}\end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32}\end{vmatrix} + a_{13}\begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32}\end{vmatrix} + a_{13}\begin{vmatrix} a$$

Examples
$$A = \begin{bmatrix} 1 & 2 & 1 \\ -1 & 2 & -1 \\ 1 & 0 & -1 \end{bmatrix}$$

$$det(A) = \begin{bmatrix} 2 & -1 \\ 0 & -1 \end{bmatrix} - 2 \begin{bmatrix} -1 & -1 \\ 1 & -1 \end{bmatrix} + \begin{bmatrix} -1 & 2 \\ 1 & 0 \end{bmatrix}$$

$$= -8$$

$$A = \begin{bmatrix} 1 & -1 & 3 \\ -1 & 0 & 1 \\ 2 & 0 & -1 \end{bmatrix}$$

$$det(A) = \begin{bmatrix} 0 & 1 \\ 0 & -1 \end{bmatrix} - (-1) \begin{bmatrix} -1 & 1 \\ 2 & -1 \end{bmatrix} + (3) \begin{bmatrix} -1 & 0 \\ 2 & 0 \end{bmatrix}$$

$$= \begin{bmatrix} 0 & 1 \\ 0 & -1 \end{bmatrix} + \begin{bmatrix} -1 & 1 \\ 0 & -1 \end{bmatrix} + \begin{bmatrix} -1 & 1 \\ 2 & -1 \end{bmatrix}$$

**Definition: Minor (4.1.4)** For any  $n \times n$  matrix  $M_{ij}$  is the determinant of the submatrix formed by deleting i—th row and j—th column of A. This determinant is called the (i,j)-minor of A or  $M_{ij}$ .

$$\begin{bmatrix} 1 & -1 & 3 \\ + & 0 & 1 \\ 2 & 0 & -1 \end{bmatrix} \qquad M_{23} = \begin{bmatrix} 1 & -1 \\ 2 & 0 \end{bmatrix} = 2$$

Examples
$$A = \begin{bmatrix} 1 & -1 & 3 \\ -1 & 0 & 1 \\ 2 & 0 & -1 \end{bmatrix}$$

$$M_{11} = \begin{bmatrix} 0 & 1 \\ 0 & -1 \end{bmatrix} = 0$$

$$M_{32} = \begin{bmatrix} 1 & 3 \\ -1 & 1 \end{bmatrix} = 1$$

$$M_{32} = \begin{bmatrix} 1 & 3 \\ -1 & 1 \end{bmatrix} = 1$$

$$M_{32} = \begin{bmatrix} 1 & 3 \\ -1 & 1 \end{bmatrix} = 1$$

**Definition: Cofactor (4.1.4)** The (i,j)-cofactor  $(C_{ij})$  of A is  $C_{ij} = (-1)^{i+j}M_{ij}$ .

### Theorem 4.1.5

The determinant of an  $n \times n$  matrix is given by:

$$\det(A) = a_{11} M_{11} - a_{12} M_{12} + a_{13} M_{13} - \dots - (-1)^{n+1} a_{1n} M_{1n}$$

$$= a_{11} C_{11} + a_{12} C_{12} + \dots + a_{1n} C_{1n}$$

Note that this is not the only formula. For  $3 \times 3$ , there are 5 others:

$$\det(A) = a_{11}C_{11} + a_{12}C_{12} + a_{13}C_{13} \qquad (\text{lst row})$$

$$= a_{21}C_{21} + a_{22}C_{22} + a_{23}C_{23} \qquad (\text{Inl row})$$

$$= a_{31}C_{31} + a_{32}C_{32} + a_{33}C_{33} \qquad (\text{3rd row})$$

$$= a_{11}C_{11} + a_{21}C_{21} + a_{31}C_{31} \qquad (\text{lst column})$$

$$= a_{12}C_{12} + a_{22}C_{22} + a_{32}C_{32} \qquad (\text{Inl column})$$

$$= a_{13}C_{13} + a_{23}C_{23} + a_{33}C_{33} \qquad (\text{3rd column})$$

We can expand on any row or column! (See Theorem 4.1.5)

Ex: 
$$A = \begin{bmatrix} 1 & -1 & 3 \\ -1 & 0 & 1 \\ 2 & 0 & -1 \end{bmatrix}$$

$$\det(A) = a_{12}C_{12} + a_{22}C_{22} + a_{32}C_{32}$$

$$= -a_{12}M_{12} + a_{22}M_{22} - a_{32}M_{32}$$

$$= -(-1)M_{12} + 0M_{22} - 0M_{32}$$

$$= M_{12} = \begin{bmatrix} -1 & 1 \\ 2 & -1 \end{bmatrix} = \begin{bmatrix} -1 \\ 1 \end{bmatrix}$$

This suggests a strategy: do the row or column with the most zeros.

### Special cases

What about special cases like diagonal, upper triangular, lower trian-

$$A = \begin{bmatrix} 3 & -4 & 7 \\ 0 & -1 & 2 & 3 \\ 0 & 0 & 2 & -5 \\ 0 & 0 & 0 & -2 \end{bmatrix}$$

$$|s+col$$

$$det(A) = a_{11} M_{11} = (1) \begin{vmatrix} -1 & 2 & 3 \\ 0 & 2 & -5 \\ 0 & 0 & -2 \end{vmatrix} = (1) (-1) \begin{vmatrix} 2 & -5 \\ 0 & -2 \end{vmatrix}$$

then det (A) is product of Liagonal entries
